Q2 2026 Fund Commentary

Commentary and opinions are provided by Franklin Advisers, Inc., Putnam Investments Canada, and Mackenzie Financial Corporation

Market Commentary

Global growth data over the quarter painted a generally resilient picture despite the ongoing conflict in the Middle East, although the euro area remained a pocket of weakness. Inflation rates were mostly higher, partly as higher energy prices related to the conflict fed into the data. The U.S. dollar rose modestly, supported by a more aggressive view of U.S. policy interest rates. The U.S. Federal Reserve Board (Fed) kept its policy interest rate unchanged but turned more aggressive in tone late in the quarter, while several other developed-market central banks, including the European Central Bank and the Bank of Japan, raised interest rates. Emerging market central banks were more mixed. In bond markets, developed market sovereign bond yields were mixed, while emerging market sovereign bond yields generally fell across most regions.

Fixed income markets gained over the quarter. Markets began on uncertain footing, with volatility around artificial intelligence (AI)-related headlines and their impact on software, as well as heightened geopolitical risk in the Middle East. Sentiment improved as the quarter progressed, supported by resilient fundamentals, strong corporate earnings and better macroeconomic conditions after a ceasefire was reached. U.S. Treasury yields were volatile over the quarter and ended modestly higher. In this environment, high-yield corporate credit generated positive returns as credit spreads narrowed. The U.S. high-yield default rate stayed below its long-term average, new-issue supply was healthy and high-yield funds attracted inflows.

Canada spent the second quarter of 2026 debating whether it was in recession. The Bank of Canada (BoC) held its policy interest rate at 2.25% in April and June, with core inflation near 2% and little energy pass-through. Gross domestic product (GDP) rose 0.5% in April month over month, taking some air out of the recession narrative, though May’s GDP flash reading was just 0.1% month over month.

Weaker economic data drove Canadian yields lower across the yield curve. Risk assets shrugged off the earlier rise in yields, with equities remaining resilient and focusing on the AI, hyperscaler and microchip manufacturer trade. Investment-grade credit stayed extremely tight by historical standards despite heavy issuance, including a Canadian record issue by Alphabet Inc. that was immediately eclipsed by an Amazon.com Inc. issue. Attractive all-in yields and asset-mix rebalancing tied to strong equity markets continued to drive positive fund flows into both Canadian and U.S. fixed-income markets, helping the market absorb heavy bond supply. First-half 2026 supply in Canada and the U.S. rose roughly 33% and 58%, respectively, from the first half of 2025.

Performance

Interest-rate strategies contributed most to performance, followed by currency positions and sovereign-credit exposures.

Overweight duration (sensitivity to interest rate changes) exposure in South Africa and Kazakhstan contributed to performance. Among currencies, overweight positions in the Colombian peso, South African rand and Egyptian pound contributed to performance, as did U.S.-dollar-denominated sovereign credit exposures.

Underweight duration exposure to the euro area detracted from performance.

Security selection in the information technology sector, the gaming, lodging and leisure industry, and the food and beverages industry contributed to performance. Security selection in non-rated securities such as convertible bonds and in issuers domiciled in the Cayman Islands also contributed to performance.

Seagate Technology Holdings plc contributed to the Fund's performance because the overweight position benefited as the underlying equity rose on continued momentum. Overweight exposure to Viking Cruises Ltd. and out-of-benchmark exposure to The Chef's Warehouse, Inc. also contributed to performance.

Security selection in the broadcasting and health care industries detracted from performance, as did security selection in CCC-rated securities and the Fund's cash positioning.

An overweight exposure to Crescent Energy Co. detracted from performance because the underlying equity fell on lower energy prices. Overweight exposure to Charter Communications, Inc. and EW Scripps Company also detracted from performance.

Government of Canada (3.5%, due 2057/12/01) contributed to the Fund’s performance. In the sub-advisor’s view, the bond added high-quality, long-duration (sensitivity to interest rates) exposure at a comparatively attractive yield and stands to benefit if slower growth or moderating inflation lowers long-term interest rates.

An allocation to and selection within government bonds contributed to performance.

Government of Canada (3.5% 2029/09/01) detracted from the Fund’s performance on a benchmark-relative basis. Its shorter duration captured less upside than longer-maturity bonds when long-term Canadian yields eased. In the sub-advisor’s view, the result reflected yield-curve positioning rather than any concern about Canada’s credit quality.

Portfolio Activity

The sub-advisor added a position in Hungary and sold the position in Ghana.

The sub-advisor added Edged Compute LLC, increased Oak Eagle AcquireCo Inc., sold QXO, Inc. and reduced Nexstar Media Group, Inc.

The sub-advisor increased CU Inc. (4.085%, 2044/09/02) to capture additional income from a highly rated regulated utility. In the sub-advisor’s view, the company’s diversified electricity and natural-gas networks generate relatively predictable cash flows, while supportive regulation and prudent financing underpin its capacity to service long-term debt.

The sub-advisor sold Government of Canada (3.0% 2027/02/01) because the bond’s approaching maturity offered limited remaining income and price-appreciation potential. Proceeds were redeployed into longer-dated government securities offering higher yields and greater sensitivity to a potential decline in Canadian interest rates.

The sub-advisor reduced Province of Ontario (3.95%, 2035/12/02) to manage Ontario concentration and redeploy capital toward longer-dated securities offering greater yield and duration potential. In the sub-advisor’s view, the decision reflected relative value and sizable provincial borrowing requirements rather than any material deterioration in Ontario’s creditworthiness.

Counsel Fixed Income Series F

Outlook

In the sub-advisor's view, uncertainty about growth and inflation stemming from the conflict in the Middle East has dominated the global economic outlook, and the sub-advisor is monitoring developments closely. Global growth is expected to slow modestly, with emerging markets, particularly in emerging Asia, expected to grow faster than advanced economies. The sub-advisor emphasises that the conflict's effects on emerging markets aren't uniform and need to be assessed country by country, considering factors such as the energy intensity of production, initial macroeconomic conditions and policy responses.

The sub-advisor maintains the view that the U.S. dollar is broadly overvalued and could depreciate over the medium term, although some shorter-term strength may persist around the conflict. The sub-advisor believes the shift into non-U.S. assets may be a sustainable trend and looks to carry as a source of return, seeing select opportunities in non-dollar emerging market assets. Core regional views are largely unchanged. The sub-advisor sees value in parts of the Asia-Pacific region, including Australia, and in Latin America, favouring countries with sound macroeconomic policies, relatively high yields and undervalued currencies. The sub-advisor also sees opportunities in select emerging and frontier markets in both local-currency and hard-currency assets, including some African countries where reform efforts have improved fundamentals.

Recent developments in countries the Fund invests in include the removal of Greece from the European Commission's macroeconomic-imbalance monitoring as its vulnerabilities have declined, a credit-rating upgrade for South Africa reflecting progress on fiscal consolidation, and a set of measures in India aimed at attracting foreign inflows and stabilising markets. Most Mexican exports to the U.S. are also expected to remain exempt from new tariffs following trade consultations.

In the sub-advisor's view, corporate fundamentals have been resilient and market technicals supportive, and these trends may persist alongside bouts of volatility tied to U.S. policy and geopolitical tensions. The sub-advisor notes continued uncertainty around the re-establishment of regular trade flows for oil, gas and other raw materials through the Strait of Hormuz. On valuations, credit spreads remain historically rich but, in the sub-advisor's view, appropriate given a low-default environment and open capital markets. The sub-advisor expects the Fed to remain data-dependent.

The sub-advisor stays focused on company fundamentals, balance-sheet health, free cash flow and the resilience of credits to slower growth, and remains cautious on deeply distressed names. Market technicals remain solid, with steady demand and consistent new issuance, and yields and sub-par dollar prices remain attractive even as spreads sit at levels the sub-advisor views as fair rather than compelling. Risks the sub-advisor is watching include higher-than-expected inflation, policy missteps, a more severe slowdown and heightened geopolitical tension.

There are differing opinions in the market on whether the Fed may raise interest rates over the coming months. Some participants read recent hawkish comments from Fed Chair Kevin Warsh as a signal, while others view the hawkishness as inevitable given the need to demonstrate independence from a U.S. administration that has been pushing for lower interest rates. In the sub-advisor’s view, the outlook for the Fed is therefore unclear.

There is more consensus in Canada, where the weaker economy has begun to show some stabilization despite falling into a technical recession. In the sub-advisor’s view, the April bounce is a correction rather than a recovery. The labour market is soft, business investment keeps falling on tariff and Canada-United States-Mexico Agreement uncertainty, the mortgage reset cycle grinds on and core inflation gives the BoC room to ease monetary policy. The sub-advisor believes the BoC could cut it policy interest rate before year-end, likely by 25 basis points.
